## PROFILE

Backend-focused CS student with hands-on experience building Django REST APIs, an AI chatbot using RAG, and a multi-provider LLM evaluation platform. Comfortable working across the full backend stack — databases, containerization, CI/CD, and API integrations. Currently in A2SV's G7 cohort, training daily in algorithms and data structures.

## TECHNICAL SKILLS

**Languages:** Python, JavaScript, SQL

**Frameworks & Libraries:** Django, Django REST Framework, React, LangChain, GraphQL

**AI / LLM:** RAG pipelines, vector databases (pgvector), LLM API integrations (multiple providers), LiteLLM

**Databases:** PostgreSQL, SQLite, Redis

**Tools:** Docker, Git, GitHub Actions (CI/CD), Linux, Postman

## PROJECTS

**Higg-AI** | *Django, LangChain, pgvector, Docker*

[🔗 Code](#) | [🌐 Live Site](#)

- Built an AI chatbot API that lets users ask plain-English questions about National Bank of Ethiopia regulations, instead of reading through dense PDF documents.
- Extracts and indexes PDF content into a vector database; uses a retrieval pipeline to find relevant sections and generate accurate answers, with memory for follow-up questions.
- Entire stack runs at \$0 using free-tier AI APIs; fully containerized with Docker.

**EvalBoard** | *Django, React, httpx, Docker*

[🔗 Code](#) | [🌐 Live Site](#)

- A platform for testing and comparing AI language models across providers — scoring outputs and tracking performance systematically.
- Live analytics dashboard showing score trends, latency, and pass/fail distribution across all test runs.
- Built a custom HTTP client from scratch to support multiple AI providers, with error handling and rate limit detection; users supply their own API keys, never stored.

**Virtual Blood Bank (VBB)** | *Django, DRF, Docker, PostgreSQL, GitHub Actions*

[🔗 Code](#)

- REST API for Ethiopian healthcare workers to manage blood inventory and donation requests across facilities; includes automated testing via CI pipeline on every code push.

**E-Commerce REST API** | *DRF, Docker, PostgreSQL, Chapa*

[🔗 Code](#) | [🌐 Live Site](#)

- Scalable shopping platform API with authentication, product management, order processing, and Chapa payment gateway integration; containerized and deployed to a live host.

## EDUCATION

**Addis Ababa University**

*Oct 2023 – Present*

B.Sc. Computer Science — CGPA: 3.5

**A2SV — Africa to Silicon Valley**

*Feb 2026 – Present*

In-Person Competitive Training Program (G7)

**ALX ProDev Backend Engineering**

*Jun – Oct 2025*

**Certificate** — Django, Docker, GraphQL, Redis, CI/CD
